

ThomasPay

Winning ways with
jackpot payments.

ThomasPay – a safer way

Introducing a versatile new suite of products and systems for your gaming machines – designed to give you more secure options for dealing with jackpot payments and help you operate with even greater efficiency.

Our range offers you:

- AutoPay – a simple way to automate your hand payments.
- TicketPay – secure payment on standard slot tickets.
- Cashless – the ultimate in security and operational performance.
- Loyalty & bonusing programs – reward and retain your best customers.
- Management & reporting tools – track and improve your financial performance.

The PayStation

[The brains behind our applications]

The 8000 series PayStation is the powerhouse behind all ThomasPay applications. It offers you many advanced features:

- Heavy duty steel construction makes it as physically secure as an ATM.
- 21" touchscreen prompts users through all operations.
- Latest generation printer for receipts and audit reports.
- High quality banknote acceptor reads standard slot tickets.
- Advanced coin validator and coin hoppers work seamlessly with change machine applications.
- ATM-grade, multi-cassette note dispenser lets you pay out large jackpots.
- NFC card reader identifies staff members and authorises controlled actions.

AutoPay

It does the simple things brilliantly

If you just need a basic system to automate hand payments then choose Thomas AutoPay. An attendant manually records hand payments, then enters the data on the touchscreen of the Thomas **PayStation** from which payments are dispensed to the player. Job done.

AutoPay also has more advanced uses. A Sentinel card reader/display system, compatible with any CC-talk or SAS-based machine, can be connected to each gaming machine. When a player presses collect to obtain their winnings, a floor attendant inserts their Service card into the Sentinel and the winnings are transferred to the card. The

attendant then takes the player to the Thomas **PayStation**, inserts their Service card and enters their attendants ID PIN, allowing the player to collect their winnings. This automated payment means there's no room for error or breaches of security.

TicketPay

[Just the ticket for additional security]

With TicketPay, all cash wins are printed on standard slot tickets. These are dispensed from an add-on printer module, which works seamlessly with all CC-talk or SAS-based machines.

When you use it in the secure (off-line) mode a special security dongle encrypts a code for every win. This is added to the printed ticket as a bar code, along with the amount of the win. The Thomas **PayStation** reads the code, via the banknote reader, validates the ticket and pays out the winnings printed on the ticket. The ticket stays in the stacker of the banknote reader for audit reconciliation.

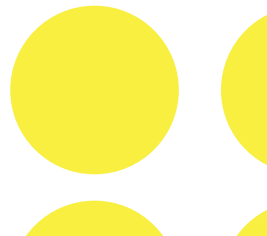

An ideal solution for operators who require secure payout but don't require a networked solution.

Networked for less work

If you have a requirement for real time information you can use the networked mode to obtain

a real-time and accurate view of payment information to help you manage your business more efficiently.

In this mode, TicketPay connects all your machines to a site server via a secure wireless or a wired Ethernet connection. When a player has a win, the amount is printed onto a bar coded ticket and also recorded on the server. When the ticket is fed into the Thomas **PayStation**, the bar code is compared to the data on the server. If the two match the player can collect their winnings – and start celebrating.

Cashless Operation

[Where no cash is king]

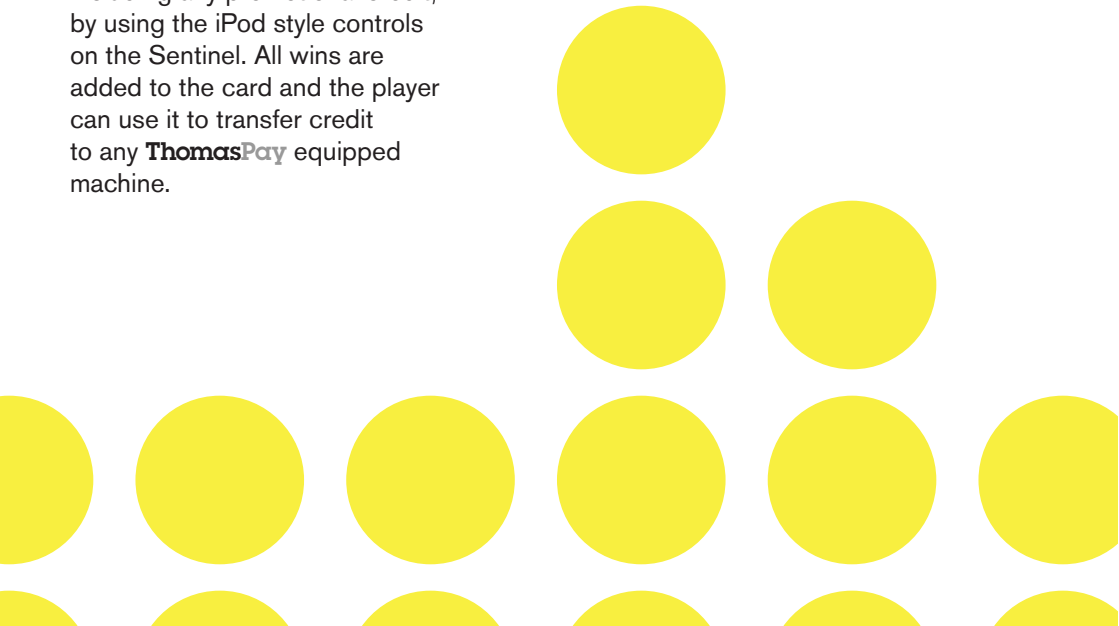

Our Cashless Operation offers the power to more securely handle cash on site and, as an option, provides a cost-effective pathway to promotional and loyalty features targeted to drive player spend. For this, your gaming machines are fitted with a Sentinel NFC card reader.

Each player receives a card that they insert into the reader when they play. Cash can still be fed directly into the machines but for added security the cards can be 'topped-up' at the Thomas **PayStation** or on-site managers can add to the card using your site server.

The player can see how much they have in their account, including any promotional credit, by using the iPod style controls on the Sentinel. All wins are added to the card and the player can use it to transfer credit to any **ThomasPay** equipped machine.

When they've finished, the player redeems the card value at the cash desk or the Thomas **PayStation**. Security is assured as the site server validates and controls all transactions.

You can even choose to use a central server to collect data from individual site servers for consolidated reporting and management control.

You can rely on Thomas

Thomas has been helping gaming operators deal with cash security issues for 40 years. Our new **ThomasPay** range offers you the products and systems you need to address a variety of challenges, such as larger payouts, hopper failure, hopper starvation, leakage from error and fraud, operational efficiency and cash security.

We're also introducing two new, sophisticated software applications. These are specially designed to help boost your business through loyalty & bonusing and performance & data management.

Management and loyalty programs

[Boost your business performance]

If you want to make the most of your machines, you can take advantage of our advanced programs for asset management and reporting as well as loyalty and bonusing.

By using our management and reporting programs you can help your site operate more efficiently, improve its financial performance and reduce losses from error and fraud.

With our loyalty and bonusing applications you can really get to know your customers, monitoring

player trends to find out which players are most important to your business. You can then offer them a wide array of promotional incentives to reward and retain them.

These two programs will let you stay one step ahead of your competition.

A new Thomas. An impressive history.

The new Thomas builds on the reputation we've built up over the past 40 years. One that has seen us dedicate ourselves to helping you deal with the issues of new payout limits and cash transaction management.

We are now committed, more than ever, to providing you with the technology to meet the challenges of today – and be prepared for those of tomorrow.
